By default, you can select from the following items for encryption: IMG, BMP, JPG, WAV, and AU, among others. Steghide UI is a universal solution for all people who want to protect their files or albums. Unfortunately, due to the odd way that steghide works, it is only possible to launch it using the command-line console. Steghide UI was designed in such a way that it enables you to easily configure the steghide command-line arguments. Plus, Steghide UI offers many utilities that simplify the entire process of hiding data and then restoring it. This is why the app becomes valuable for those users who intend to encrypt many files.
